### AEP Span Fontana Facility Goes Solar

West Sacramento, California – June 24, 2014 – When the decision was made to replace a 20 year old roof at the AEP Span Fontana facility, it was a perfect opportunity for the organization to reaffirm its commitment to the environment and the use of alternative energy.

“We are serious about our environmental footprint,” said John Cross, President of AEP Span, a division of ASC Profiles LLC. “Solar power is an excellent form of alternative energy with numerous environmental benefits. In fact, this is our second location where we have installed solar panels.” The West Sacramento corporate headquarters was the first location to have solar carports and roof arrays installed. In ASC Profiles’ corporate offices, a monitor was installed that provides real time cumulative results of the total energy generated and total CO2 offset for both the corporate headquarters and the AEP Span Fontana facility.

The new 439.2 kw solar energy system is a fixed-tilt, roof mount solar array that was installed on AEP Span’s architectural standing seam Span-Lok™ *hp* metal roof. With the solar panels now operational, the anticipated results the AEP Span Fontana facility will offset annually is 553 metric tons of CO2, which is equivalent to removing 111 cars from the road, saving 200 tons of waste from landfills, or providing electricity for 74 houses. The expected life of the system is 30 years.

AEP Span has partnered with a variety of customers providing solar structures in the solar industry. Moreover, AEP Span offers a wide range of architectural standing seam metal roof panels that are a perfect complement to roof mount solar panels for the commercial and industrial market. AEP Span standing seam metal roof panels include Design Span® *hp*, Multilok-24®, Klip Rib®, SpanSeam™, Span-Lok™ *hp*, and Curved Span-Lok™.

**ASC Profiles LLC** is a subsidiary of BlueScope Steel and Nippon Steel & Sumitomo Metals Corporation. **ASC Profiles** is an industry leading manufacturer of cold-formed steel building components since 1971. **ASC Profiles** consists of three distinct business divisions, each serving a different market segment within the industry. **ASC Steel Deck** delivers a high quality line of structural roof and floor deck that has been fully tested for the commercial construction market. **AEP Span** provides architecturally engineered panels for steel roof and siding products for the commercial and industrial markets. **ASC Building Products** offers high quality steel roof and wall panels for the residential, light commercial, and agricultural markets.
